SPRING PLUNGERS

Order No. 2470.30.

Spring plungers can be used as ejectors, damper pins, fixing and retaining pins in many sectors of the tool-, jig- and fixture-making industries.

For a longer lifetime and the prevention of defective spring clamps, especially when used as an retaining pin, a new series of high-performance plastic with additives. The optimized material is wear and abrasion resistant. The newly designed „spring plunger“ thus **permits lateral loads of up to 25°**. A specially developed thread lock reliably prevents loosening **even with strong vibrations in the tool**. A end position damping reduces the kinetic energy on the spring clamps and **prevents it from breaking away even at high speeds**.
